

Complete service in Utility Systems

to build your process the right way

Wright Process Systems designs and builds complete, code-compliant utility systems to support your facility's overall functioning. This service is not an afterthought: We design plants and systems to integrate seamlessly with the utility infrastructure so your system works optimally all the time.

Wright Process Systems: Your utility system experts

Our utility system capabilities include:

- Steam systems—sterile steam, culinary steam, high-pressure steam, low-pressure steam
- Water systems—filtered, city, process, RO, softened, heated, sterile, UV, DI, chilled, glycol, tower, ice, and plant water
- Compressed air systems—sterile, dehumidified, de-oiled, heated, service, and instrument air
- Wastewater systems—wastewater treatment, monitoring, equalization, and neutralization, and effluent handling
- Solids recovery systems
- High-strength waste systems
- Bulk chemical distribution and piping

Complete utility system service for optimal plant functioning

Wright Process Systems maintains expert-level utility system engineers, construction professionals, and installers who are well versed in all of the relevant codes and regulations. We design all systems to fit the needs of your plant, with consideration given to future plant expansions or possible upgrades.

Wright Process Systems is your partner in process system success
